**HS 442 STUDENTS**

Marathon
(a granular pesticide, applied topically)
will be applied to your Mums and Poinsettias this afternoon.

Marathon is activated by wetting the chemical
(i.e., watering it into the potting media).

So...
- Please take care not to wash the chemical out of the top of the pot by watering too hard.
- And, water these plants lightly for the next 7-10 days to avoid leaching the marathon out of the bottom of the pot.

If you have any questions, just ask!

Thanks,
Diane
