

## **INSTALLING PROGRAM PRESENCE**

### **Windows Operating System**

1. Go to <http://www.mbr-pwrc.usgs.gov/software/presence.shtml>
2. Scroll down to “Download” section and click on “Download PRESENCE”
3. Save zip file preferably to desktop or downloads folder (make sure you know where you are saving it)
4. Unzip the folder that you downloaded and saved. This can be done by right clicking and selecting “extract all”
5. Open the new folder titled “setup\_presence” and double click on the setup\_presence.exe icon
6. Follow the directions to install Program PRESENCE. You should not need to change anything in the installation process.

#### *Possible problems during installation:*

If you are unable to install the program due to access restrictions, install PRESENCE in a different folder (not "C:\Program Files"). You can create a folder named "C:\Pgms" to hold the program which will not be write-protected (like C:\Program Files).

### **Mac or Linux Operating Systems**

Program PRESENCE has been run successfully on MAC's (using BootCamp, Wine or Parallels) and Linux PC's (using Wine). The setup process is identical to above once you are using BootCamp, Wine or Parallels.

*Note: From time to time, it's a good idea to check to make sure you have the latest version of PRESENCE. This can be done automatically in the 'Tools' menu. This might prevent the case of reporting a bug which has already been fixed.*
