</thead>
<tbody>
<tr>
<td>10</td>
<td>69</td>
<td>35</td>
<td>77</td>
<td>21</td>
<td>500</td>
</tr>
</tbody>
</table>

Stand Treatment Method

This stand will be thinned from below to a residual target basal area of 60 ft² per acre with a range of 55-70 ft². Leave trees will be selected from the dominant and codominant crown classes and selection will be based on diameter and species. Species preference will be in the following order:

- Longleaf pine
- Shortleaf pine
- Loblolly pine
- Virginia pine
- Hardwood species

Resource Protection

Streamside Management Zone (SMZ)

All streamside management zones within each stand will be protected in accordance with the guidelines in Amendment #14 to the existing Forest Land and Resource Management Plan and the guidelines as outlined in the revised Forest Land and Resource Management Plan. See attached SMZ guidelines and the EIS Mitigation Measures.

Riparian Corridors

When riparian corridors are identified within the stand or adjacent to the stand, the guidelines for riparian corridors as outlined in the revised Forest Land and Resource Management Plan will be implemented. See riparian guidelines and the EIS Mitigation Measures.

Heritage Resources

Cultural resource surveys will be completed prior to any harvest activity. Should any cultural resources in need of protection be found, mitigation measures will be implemented, if appropriate. If any cultural resources are uncovered during harvesting, harvesting will be stopped in that area and an archaeologist will investigate to determine significance. Harvesting will continue in parts of the stand not affected, if possible. If it is determined that
no protection is necessary, then harvesting will resume. Otherwise, the area specified by
the archaeologist will be delineated on the ground and protected from harvesting.

Threatened and Endangered Species

A biological evaluation and a biological assessment of how this project will affect any
species Federally listed as threatened, endangered or proposed, or identified by the Forest
Service as sensitive or tracked by the Alabama Natural Resource Heritage Program as
locally rare have been completed in the project area. No threatened, endangered, sensitive
or locally rare species has been identified in this project area.

A rare habitat, rock bluffs is in Stand 10. Consult with the wildlife biologist for location and
mitigation measures.

Indiana Bat Protection: No caves which are potential hibernacula for the Indiana bat have
been identified within this project area. Refer to the EIS Mitigation Measures for additional
bat protection measures.

Roads

A. Present access and proposed system roads:

The forest road system to access these individual stand(s) in this project are in place and
no new system roads are needed.

B. List existing roads where hauling is prohibited or restricted, and include restrictions:

   None

C. System roads - sale related:

   106a1

D. System roads - maintenance:

   None

All temporary roads and landings within the stand will be closed and revegetated as
needed for erosion control at the close of timber harvesting operations.

Soils – Refer to Soils Table in the Forest Health and Restoration Project Environmental
Impact Statement

Visual Quality

Stand 10 is within an area with a Scenic Integrity Objective of high. Refer to the EIS
Mitigation Measures.
Stand Prescription – Thinning Hardwood

Compartment 148

<table>

</tbody>
</table>

Stand Treatment Method

This stand will be thinned from below to a residual target basal area of 80 ft² per acre with a range of 55-70 ft². Leave trees will be selected from the dominant and codominant crown classes and selection will be based on diameter and species. Species preference will be in the following order:

- Oak species
- Hickory species
- Yellow poplar
- Longleaf pine
- Shortleaf pine
- Loblolly pine
- Virginia pine

Resource Protection

Streamside Management Zone (SMZ)

All streamside management zones within each stand will be protected in accordance with the guidelines in Amendment #14 to the existing Forest Land and Resource Management Plan and the guidelines as outlined in the revised Forest Land and Resource Management Plan.

Riparian Corridors

When riparian corridors are identified within the stand or adjacent to the stand, the guidelines for riparian corridors as outlined in the revised Forest Land and Resource Management Plan will be implemented. See riparian guidelines and the EIS Mitigation Measures.

Heritage Resources

Cultural resource surveys will be completed prior to any harvest activity. Should any cultural resources in need of protection be found, mitigation measures will be implemented, if appropriate. If any cultural resources are uncovered during harvesting, harvesting will be stopped in that area and an archaeologist will investigate to determine significance.
Harvesting will continue in parts of the stand not affected, if possible. If it is determined that no protection is necessary, then harvesting will resume. Otherwise, the area specified by the archaeologist will be de-timed on the ground and protected from harvesting.

Threatened and Endangered Species

A biological evaluation and a biological assessment of how this project will affect any species Federally listed as threatened, endangered or proposed, or identified by the Forest Service as sensitive or tracked by the Alabama Natural Heritage Program as locally rare have been completed in the project area. No threatened, endangered or sensitive species has been identified in this project area.

Mountain camellia, a locally rare species is in Stand 46. Consult with the wildlife biologist for location and mitigation measures.

A rare habitat, rock outcrops, is located in Stand 15. Consult with the wildlife biologist for location and mitigation measures.

Indiana Bat Protection: No caves which are potential hibernacula for the Indiana bat have been identified within this project area. Refer to the EIS Mitigation Measures for additional bat protection measures.

Roads

A. Present access and proposed system roads:

The forest road system to access these individual stand(s) are in place and no new system roads are needed.

1. ROW needed for to access to a portion of Stand 46

B. List existing roads where hauling is prohibited or restricted, and include restrictions:

None

C. System roads - sale related:

104b1, 104b2 and 106a

D. System roads - maintenance:

Stand Treatment Method

This stand will be thinned from below to a residual target basal area of 60 ft² per acre with a range of 55-70 ft². Leave trees will be selected from the dominant and codominant crown classes and selection will be based on diameter and species. Species preference will be in the following order:

- Shortleaf pine
- Longleaf pine
- Loblolly pine
- Virginia pine
- Hardwood species

Resource Protection

Streamside Management Zone (SMZ)

All streamside management zones within each stand will be protected in accordance with the guidelines in Amendment #14 to the existing Forest Land and Resource Management Plan and the guidelines as outlined in the revised Forest Land and Resource Management Plan.

Riparian Corridors

When riparian corridors are identified within the stand or adjacent to the stand, the guidelines for riparian corridors as outlined in the revised Forest Land and Resource Management Plan will be implemented. See riparian guidelines and the EIS Mitigation Measures.
Heritage Resources

Cultural resource surveys will be completed prior to any harvest activity. Should any cultural resources in need of protection be found, mitigation measures will be implemented, if appropriate. If any cultural resources are uncovered during harvesting, harvesting will be stopped in that area and an archaeologist will investigate to determine significance. Harvesting will continue in parts of the stand not affected, if possible. If it is determined that no protection is necessary, then harvesting will resume. Otherwise, the area specified by the archaeologist will be delineated on the ground and protected from harvesting.

Threatened and Endangered Species

A biological evaluation and a biological assessment of how this project will affect any species Federally listed as threatened, endangered or proposed, or identified by the Forest Service as sensitive or tracked by the Alabama Natural Resource Heritage Program as locally rare have been completed in the project area. No threatened, endangered or sensitive species has been identified in this project area.

A locally rare species, Nestria, is located in Stand 8. A locally rare species, Large whorled pogonia, is located in Stand 14. Consult with the wildlife biologist for location and mitigation measures.

Indiana Bat Protection: No caves which are potential hibernacula for the Indiana bat have been identified within this project area. Refer to the EIS Mitigation Measures for additional bat protection measures.

Roads

A. Present access and proposed system roads:

The forest road system to access these individual stand(s) in this project are in place and no new system roads are needed.

B. List existing roads where hauling is prohibited or restricted, and include restrictions:

None

C. System roads - sale related:

245, 250, 4WD road to Stand 14

D. System roads – maintenance:

Restoration Treatment Method

Roller drum chop (single or double pass)

Roller drum chop (single or double pass) followed by site preparation prescribed burn

Plant shortleaf pine bareroot seedlings at a minimum of 9’ X 9’ spacing. Wider spacing (10’ X 10’) may be necessary, depending on availability of seedlings.

Resource Protection

Streamside Management Zone (SMZ)

All streamside management zones within each stand will be protected in accordance with the guidelines in Amendment #14 to the existing Forest Land and Resource Management Plan and the guidelines as outlined in the revised Forest Land and Resource Management Plan.

Riparian Corridors

When riparian corridors are identified within the stand or adjacent to the stand, the guidelines for riparian corridors as outlined in the revised Forest Land and Resource Management Plan will be implemented. See riparian guidelines and the EIS Mitigation Measures.

Heritage Resources

Cultural resource surveys will be completed prior to any restoration activity. Should any cultural resources in need of protection be found, mitigation measures will be implemented, if appropriate. If any cultural resources are uncovered during restoration, restoration will be stopped in that area and an archaeologist will investigate to determine significance. Restoration will continue in parts of the stand not affected, if possible. If it is determined
that no protection is necessary, then restoration activities will resume. Otherwise, the area specified by the archaeologist will be delineated on the ground and protected from restoration activity.

Threatened and Endangered Species

A biological evaluation and a biological assessment of how this project will affect any species Federally listed as threatened, endangered or proposed, or identified by the Forest Service as sensitive or tracked by the Alabama Natural Resource Heritage Program as locally rare have been completed in the project area. If threatened, endangered, sensitive or locally rare species have been identified in this project area, consult with Wildlife Biologist for mitigation measures.

Roller drum chopping will not begin until after the ground-nesting season is over. Refer to the existing Forest Land and Resource Management Plan and the guidelines as outlined in the revised Forest Land and Resource Management Plan.

Indiana Bat Protection: If caves which are potential hibernacula for the Indiana bat have been identified within this project area, follow appropriate mitigation measures. Refer to the EIS Mitigation Measures for additional bat protection measures.

Roads

A. Present access and proposed system roads:

The forest road system to access these individual stand(s) are in place and no new system roads are needed.

Soils – Refer to Soils Table in the Forest Health and Restoration Project Environmental Impact Statement

All site preparation fire lines will be mulched and/or seeded following the site preparation burn.

Visual Quality

Visual quality objectives as outlined the existing Forest Land and Resource Management Plan and the Scenery Management system guidelines as outlined in the revised Forest Land and Resource Management Plan will be utilized in this project. Any mitigation measures listed in the Scenery Management System in the analysis section of the Forest Health and Restoration Project Environmental Impact Statement will be implemented.

Roads

A. Present access and proposed system roads:

The forest road system to access these individual stand(s) are in place and no new system roads are needed.

Soils – Refer to Soils Table in the Forest Health and Restoration Project Environmental Impact Statement

All site preparation fire lines will be mulched and/or seeded following the site preparation burn.

Visual Quality

Visual quality objectives as outlined the existing Forest Land and Resource Management Plan and the Scenery Management system guidelines as outlined in the revised Forest Land and Resource Management Plan will be utilized in this project. Any mitigation measures listed in the Scenery Management System in the analysis section of the Forest Health and Restoration Project Environmental Impact Statement will be implemented.
Pine Restoration Prescription (Ligustrum)

Restoration Treatment Method

Roller drum chop (single or double pass)

Roller drum chop (single or double pass) followed by site preparation prescribed burn

Plant longleaf pine containerized seedlings at a 9’ X 9’ spacing

Resource Protection

Streamside Management Zone (SMZ)

All streamside management zones within each stand will be protected in accordance with the guidelines in Amendment #14 to the existing Forest Land and Resource Management Plan and the guidelines as outlined in the revised Forest Land and Resource Management Plan.

Riparian Corridors

When riparian corridors are identified within the stand or adjacent to the stand, the guidelines for riparian corridors as outlined in the revised Forest Land and Resource Management Plan will be implemented. See riparian guidelines and the EIS Mitigation Measures.

Heritage Resources

Cultural resource surveys will be completed prior to any restoration activity. Should any cultural resources in need of protection be found, mitigation measures will be implemented, if appropriate. If any cultural resources are uncovered during restoration, restoration will be stopped in that area and an archaeologist will investigate to determine significance. Restoration will continue in parts of the stand not affected, if possible. If it is determined that no protection is necessary, then restoration activities will resume. Otherwise, the area
specified by the archaeologist will be delineated on the ground and protected from restoration activity.

Threatened and Endangered Species

A biological evaluation and a biological assessment of how this project will affect any species Federally listed as threatened, endangered or proposed, or identified by the Forest Service as sensitive or tracked by the Alabama Natural Resource Heritage Program as locally rare have been completed in the project area. If threatened, endangered, sensitive or locally rare species have been identified in this project area, consult with Wildlife Biologist for mitigation measures.

Roller drum chopping will not begin until after the ground-nesting season is over. Refer to the existing Forest Land and Resource Management Plan and the guidelines as outlined in the revised Forest Land and Resource Management Plan.

Indiana Bat Protection: If caves which are potential hibernacula for the Indiana bat have been identified within this project area, follow appropriate mitigation measures. Refer to the EIS Mitigation Measures for additional bat protection measures.
